DETAILED ACTION

*Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over (10-0278551 Korea).

The reference shows a multiple LC oscillator(see figures 8,9, and 10) comprising a plurality of LC oscillator stages that are coupled to preceding and succeeding stages(see figure 10). Each stage having two inputs and two outputs.

The reference does not show four stages for the differential implementation, and phase synchronous operation is not explicit. With regards the phase synchronous operation, by virtue of the connections as shown ~~such~~, the phase of each stage will be the same. The number of stages is a simple matter of design consideration due to the fact that both odd and even number of stages is allowed in a differential design. The more stages provides operation at lower frequencies.

In light of the above it would have beenobvious for one of ordinary skill in the art to have recognized the phase sync between the stages as a result of the particular coupling and also, the use of even or odd numbers of

stages being a conventional design consideration for differential stages. The more stages the oscillator has the lower the frequency of operation.
